

**FOR TREATMENT OF PSEUDOMONAS
RESISTANT OTIC INFECTIONS**

WHAT IS THERMAFFIX?

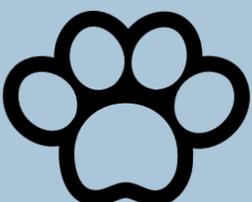

PHARMACIST DEVELOPED

Bio-adhesive, thermo-reversible delivery vehicle that is administered as a semi-liquid, and within seconds, it becomes a thickened gel at body temperature.

WHAT DOES IT CONTAIN?

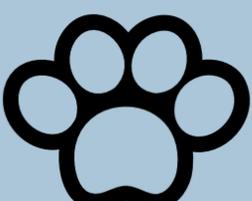

This unique formulation typically contains a combination of Enrofloxacin, Ketoconazole, and Triamcinolone. Since we compound everything to order, antimicrobial agents can be customized.

WHAT DOES IT DO?

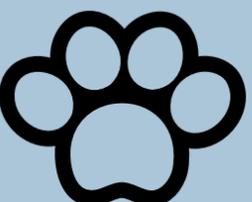

Our ThermAffix Gel formulation delivers medication to treat Pseudomonas Resistant Otic infections over an extended period of time, typically over a 5-7 day period.

WHY THERMAFFIX?

CUSTOMIZABLE

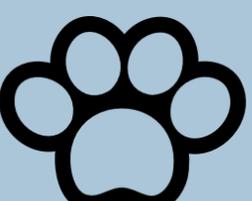

All ThermAffix Gel orders can be individually customizable to meet your canine population needs. Other commonly included APIs include clotrimazole and amikacin.

CONVENIENT

In our pharmacy experience, we have found that most veterinarians have reported that their patients have received positive results after only one application of the gel. One time administration means only one office visit, which means saving time and money for both you and the pet owners!

Also, we supply EVERYTHING you will need - all you need to do is administer the medication!

INCREASE REVENUE

Provide ThermAffix Gel as an added service to your pet owners! And it's easily administered in the office!
